

HUICHENG METAL Card System

Before using our color card system, please note that the Huicheng Metal color system adopts the standard RAL-K7 universal color chart.

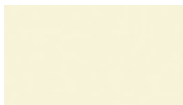

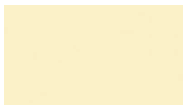

Colors included in the RAL-K7 color chart can be customized according to specific project requirements. However, due to differences in color characteristics, coating processes, material costs, and order quantities, some custom colors may incur additional design, coating, or customization fees. The final cost shall be subject to confirmation based on the actual project requirements.

Please note that RAL color codes are mainly used to confirm color standards and do not fully represent the final surface texture or finish. Product surfaces can be customized with different finishes, such as matte, gloss, textured, fine-textured, metallic, wood grain transfer, and other effects. The specific surface effect must be confirmed separately.

Due to differences in color display systems used by various monitors, mobile phone screens, and browsing devices, the colors shown on the website may differ noticeably from the actual product colors. Therefore, the final color shall be based on the physical RAL-K7 color card, approved color sample, or sample color confirmed by both parties.

In addition, slight color variations may occur due to different production batches, coating processes, and substrate surfaces. For bulk orders, special colors, or repeat orders, we recommend confirming a physical color panel or sample before production to ensure that the final result meets the project requirements.

Huicheng Metal can provide a wide range of color and surface treatment solutions according to the needs of residential, commercial, municipal, and outdoor engineering projects, offering more flexible customization options for fences, gates, doors, and metal decorative products.
